Material

Biodegradable

The employed materials are the real answer to the customer demand for product with low environmental impact, even the pen colors are obtained through the use of biodegradable masterbatches. Made by nature, for nature. Bioplastic is made from materials that come from biological sources such as sugar cane, potato starch or wood cellulose, straw or corn. The Bio-Plastic employed in the production of the biodegradable pens come from renewable sources and go back to the earth through processes of the biodegradation and composing without the release of pollutants. It contains renewable raw materials such as non-genetically modified corn starch. Our pens made from corn starch (except springs and refills) are produced according to the European Union regulations: biodegradation of at least 90% of the material in less than 6 months.

Pet Line

The line of writing articles made with recycled PET coming from the collection of industrial waste and post-consumer products like water and soft drink bottles, food packaging, boxes. Once the differentiated collection is carried out and the material is transported to special sorting centres, this is shredded and regenerated in the form of flakes and granules. Thanks to its characteristics, PET can then be reused to create new products. The recycled PET thus becomes R-PET.

Recycled

Ecoline is a line of pens produced out of recycled drink (beverage) cartons and for that reason the surface of those pens is not completely smooth. For printing on our pens we use ecological, low toxic paints compliant with EU REACH norm. Our first priority is to use recycled materials in order to protect the natural environment. Thanks to us today's waste will become a useful product – an alternative solution for schools, offices and a households. By offering this ecological product to your client you create the image of yourself as an expert in ecology which helps to establish a positive association of your brand. Due to the specific properties and fragments of recycled materials, ecological pens differ in shade and color from the standard Lecce Pen colors.

RABS

The ZEN RE-ABS pen is made from recycled plastic, thus helping to give a second life to products that would otherwise have to be disposed of with which involves additional energy consumption. The use of recycled plastics is part of a broader concept of circular economy, which represents an alternative model characterized by greater sustainability than the traditional linear economy.

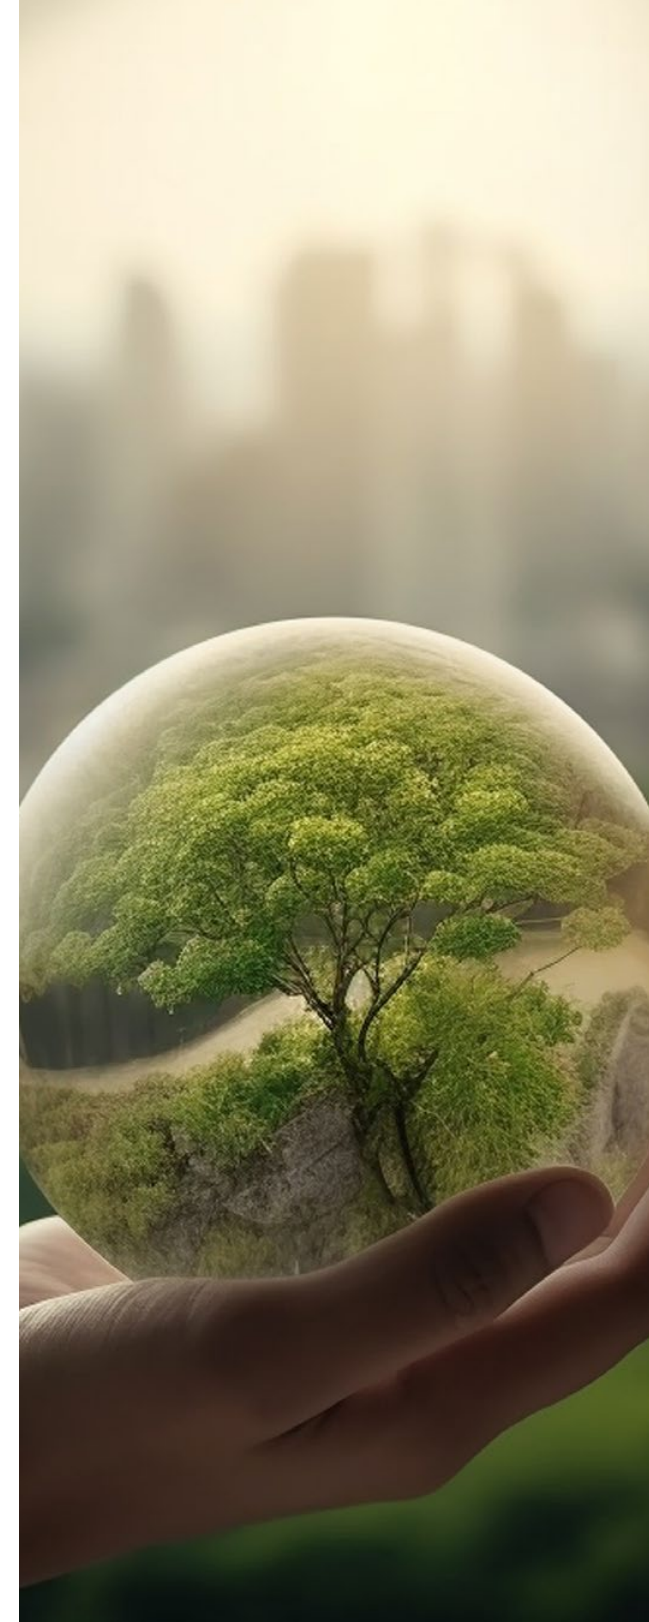

- The linear model follows the path of production, use and disposal.
- In a circular economy, resources are used as long as possible, making the most of their value during the entire life. At the end of their use they are recovered and regenerated to give them a second life.

GRS

Material is made from recycled materials containing post-consumer polyester from waste plastic bottles

SafeTouch

SafeTouch Antibacterial™ an ideal solution for public places where the pen is passed on from hand to hand, and where children play. An antibacterial component added to the plastic is active through out the entire life cycle of the pen. After 24h 90% of bacteria are killed. The antibacterial effect has been confirmed and certified. The material is completely safe for the skin

Promotional pens

Re-Pen Push NEW

EcoLine is a line of writing instruments made in a special material coming from the recycling of beverage cartons. Beverage cartons are in fact composed of several layers: **cellulose, polyethylene and aluminum**. After a first processing for the recovery of cellulose, the fraction of polyethylene and aluminum is further processed to generate a **new second raw material**. This recycled material has a very particular **aesthetic aspect** (thanks to the presence of aluminum together with the plastic component) which distinguishes it from any other on the market.
